Ultimate Road Adventure

The Dalton Highway is a rough, industrial road that begins 84 miles/134 km north of Fairbanks and ends 414 miles/662 km later in Deadhorse, the industrial camp at Prudhoe Bay. It provides a rare opportunity to traverse a remote, unpopulated part of Alaska to the very top of the continent. Traveling this farthest-north road involves real risks and challenges. This publication will help you decide whether to make the journey, how to prepare, and how to enjoy your experience. Please read this information carefully.

Know Before You Go

- There is no public access to the Arctic Ocean from Deadhorse. You must be on an authorized tour. Call toll-free 1-877-474-3565; in Fairbanks, 474-3565.
- There are no medical facilities between Fairbanks and Deadhorse, a distance of 500 miles/800 km. For emergency information, see the back page.
- Food, gas, and vehicle repair service are extremely limited. See page 5.
- There is limited cell phone service and public Internet connection between Fairbanks and Deadhorse.

Arctic Interagency Visitor Center

The award-winning Arctic Interagency Visitor Center introduces visitors from around the world to the unique and extreme environment of the Arctic. Explore interpretive exhibits, walk the nearby nature trails, and talk with our knowledgeable staff to learn more about the region's history, natural environment, and recreation opportunities. The visitor center is a partnership between the Bureau of Land Management, the National Park Service, and the U.S. Fish and Wildlife Service, and hosts an Alaska Geographic Association bookstore.

Open Daily from May 24 to September 16, from 11 a.m. to 10 p.m.
Phone: 907-678-5209 or 907-678-2014 (summer only).

Click on "Visitor Centers" and then on "Arctic Interagency Visitor Center"

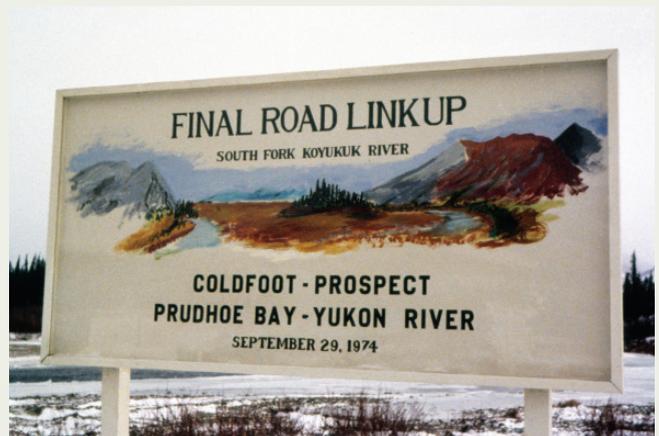

Built for Black Gold

In 1968, oil was discovered at Prudhoe Bay on Alaska's North Slope. Excitement was high at the prospect of new money to fuel Alaska's boom-and-bust economy. The nation was in the throes of an energy crisis and pushed for an 800-mile-long (1290 km) pipeline. But first, native land claims had to be settled, permits granted, environmental safeguards designed, and a road built to get workers and supplies north to the oil field.

When finally approved, construction of the Trans-Alaska Pipeline was run like a wartime project—money was no object and time was of the essence. The weather conditions, terrain, and the immensity of the project were all extreme. Engineers overcame permafrost, mountain ranges, and the relentless flow of the Yukon River in the process. Incredibly, the Haul Road was completed in just five months and the pipeline in three years (1974-77). The previously remote Arctic was changed forever.

Haul Road or Highway?

At first, the highway was called the Haul Road because almost everything supporting oil development was “hailed” on tractor-trailer rigs to its final destination. In 1981, the State of Alaska named the highway after James B. Dalton, a lifelong Alaskan and expert in arctic engineering who was involved in early oil exploration efforts on the North Slope.

2019 marks the 45th anniversary of the completion of the Haul Road, now known as the Dalton Highway.

The highway was open only to commercial traffic until 1981, when the state allowed public access to Disaster Creek at Milepost 211. In 1994, public access was allowed all the way to Deadhorse for the first time. Today, the Dalton Highway beckons adventurous souls to explore a still-wild and mysterious frontier. Respect this harsh land and appreciate the opportunity to visit a special part of our world.

“...I trucked the Haul Road to Prudhoe a few hundred times and fished Grayling Lake and hunted the South Fork Koyukuk for 10 years in a row. I really, really miss it—the beauty, quiet, and the freedom it brings one’s mind. It’s definitely the best mental medicine on earth.”

*Marshall Casteel
Myrtle Creek, Oregon*

Preparing for the Long Haul

Before you leave Fairbanks

- Inspect all tires and make sure they are properly inflated
- Check all vehicle fluids
- Replace worn hoses and belts
- Empty your RV's holding tank and fill the water tank
- Purchase groceries and supplies

Bring for your vehicle

- At least two full-sized spare tires mounted on rims
- Tire jack and tools for flat tires
- Emergency flares
- Extra gasoline, motor oil, and wiper fluid
- CB radio

Bring for yourself

- Insect repellent and head net
- Sunglasses and sunscreen
- Rain jacket and pants
- Warm clothes, including hat and gloves
- First aid kit
- Drinking water
- Ready-to-eat food
- Camping gear, including sleeping bag
- Personal medications
- Toilet paper and hand sanitizer
- Garbage bags

Safety Tips

Phones and Internet

- There is limited cell phone coverage and public Internet access between Fairbanks and Deadhorse. Both are available in Deadhorse. Coldfoot Camp and Yukon Crossing have wi-fi (fee).
- Pay phones: You can use a calling card at the Yukon River Camp, Coldfoot, Wiseman, and Deadhorse.
- Satellite phones: Some companies in Fairbanks rent satellite phones; check the phone directory under radio.

Drinking Water

- It's best to bring water with you. If you must use stream water for cooking or cleaning, treat it first by boiling rapidly for 3-5 minutes, or by using iodine tablets or a water filter. *Giardia* is widespread in Alaska waters and is highly contagious.

Fireweed abounds due to recent fire activity near the pipeline. ▶

Weather

Summer temperatures can occasionally reach the high 80s F (27-30°C) south of the Brooks Range and average in the 50s F (10-15°C) in Coldfoot. Thunderstorms are common in early summer, especially between Fairbanks and the Yukon River, and may bring lightning and sudden squalls. In general, June and July are drier months, but rainy days are frequent throughout the summer.

Weather on the North Slope is frequently windy, foggy, and cold. Snow can occur at any time of the year, especially from the Brooks Range north. In Deadhorse, average summer temperatures are in the 30s and 40s F (0-5°C).

Flash Floods

Heavy or prolonged rain can cause local flash floods anytime during the summer. Running water may cover the road or wash out culverts and bridges. Do not attempt to cross flooded areas.

Wildfires

Wildfires may burn out of control and across the highway. Do not drive through areas of dense smoke or flames—you could get trapped by swiftly changing conditions and find yourself unable to reach safety.

Wildlife

Treat all wild animals with caution. Keep a clean camp so you don't attract wildlife. Do not approach or feed any animals. Moose and muskoxen may appear tame, but can be dangerous if approached too closely. Never get between a cow and her calves. If moose feel threatened they will flatten their ears, raise the hair on their neck, and may charge. Wolves and foxes on the North Slope may carry rabies. Avoid all contact between these animals and yourself and your pets. See page 17 for more information on where to look for wildlife.

Visitor Information Centers

In Fairbanks

Morris Thompson Center
Alaska Public Lands
Information Center
101 Dunkel Street, #110
Fairbanks, AK 99701
Phone: 907-459-3730
Fax: 907-459-3729

north of the Yukon River
bridge. No phone. Closed in
winter. Yukon River camp is
open year-round.

In Coldfoot

Arctic Interagency
Visitor Center
Coldfoot, MP 175
Phone: 907-678-5209
(summer only). Open daily
from May 24–September 16.
Closed in winter.

Services Are Limited

Notice: There are no public services at Department of Transportation maintenance stations or Alyeska Pipeline Service Company pump stations.

Medical Facilities: There are no public or emergency medical facilities along the Elliott or Dalton highways.

Banking: There are no banks. ATM machines are available in Deadhorse. Most services accept major credit cards and traveler's checks.

Groceries: There are no grocery stores along the highway. Snack food and cafés are available at several locations.

Phone: There is limited cell phone coverage from Elliott Highway Milepost 28 until just outside of Deadhorse. Wi-fi available for a fee at Coldfoot Camp and Yukon Crossing.

Road Conditions

The road is narrow, has soft shoulders, high embankments, and steep hills. There are lengthy stretches of gravel surface with sharp rocks, potholes, washboard, and, depending on the weather, clouds of dust or slick mud. Watch out for dangerous curves and loose gravel, especially between Livengood and the Yukon River (MP 0-56). You may encounter snow and ice north of Coldfoot any month of the year. Expect and prepare for all conditions. Road construction occurs in various areas and can cause some delay.

The Dalton Highway is paved from Milepost 37 to 49 and from Milepost 90 to 197 (Gold Creek). Beyond that there is pavement (with breaks) from Milepost 335 (Happy Valley airstrip) to 362.

Proposed Road Construction

- 2018 & 2019 Elliot MP 0-12 & 21
- 2018 Dalton MP 362-379
- 2018 Dalton MP 209-222

For current road conditions:

- 511.alaska.gov
- www.alaskanavigator.org/fairbanks

Rules of the Road

- ✓ Big trucks have the right of way.
- ✓ Slow down when passing other vehicles to avoid damaging them with flying rocks.
- ✓ Always drive with your lights on so others can see you.
- ✓ Keep your headlights and taillights clean so they are visible.
- ✓ Stay on the right side of the road.
- ✓ Don't stop on bridges, hills, or curves.
- ✓ Check your rear-view mirror regularly.
- ✓ If you spot wildlife, pull over to a safe location before stopping.
- ✓ Slower traffic should pull over at a safe location and allow other vehicles to pass.

Mileage Chart

Miles (km)	Fairbanks	Livengood	Yukon River	Arctic Circle	Coldfoot	Atigun Pass	Galbraith Lake	Deadhorse
Fairbanks		84 (134)	140 (224)	199 (318)	259 (414)	328 (525)	359 (574)	498 (797)

Road Tips

Car Trouble

If your car breaks down, get off the road as far as possible and set flares. Towing services are available from Fairbanks or Deadhorse (907) 659-3308. You will need to provide credit card information by cell phone (near Fairbanks or Deadhorse), otherwise by satellite phone or in person if you can arrange for a ride.

CB Radios

Truckers and road workers monitor Channel 19. With a CB you can ask them whether it's safe to pass or tell them when it's safe to pass you. In poor visibility, you can warn oncoming trucks if there are other vehicles close behind you. You can communicate with flaggers, pilot cars, and heavy equipment operators.

Emergency

Be prepared for minor emergencies. In a critical emergency, use a CB radio to call for help and relay a message to the Alaska State Troopers. If you are in cell phone range (Fairbanks or Deadhorse) you can call the troopers at 800-811-0911. It may be many hours before help arrives.

Rental Cars

Many rental car agreements prohibit driving on the Dalton Highway and other gravel roads. Violating the rental car agreement can be very expensive, especially in the event of a malfunction or accident.

Repairs

Prepare to be self-sufficient. Limited tire and repair services are available at only two service stations between Fairbanks and Deadhorse—a distance of 500 miles/800 km. They can have parts delivered from Fairbanks, but that's expensive.

Fueling up in Deadhorse.

Frequently Asked Questions

How long does it take to make the trip?

Much depends on weather, road conditions, road construction, and your own interests. The roundtrip to Prudhoe Bay and back demands at least four days. Under good conditions, expect the following driving times from Fairbanks to:

Yukon River	3 hours
Arctic Circle	5 hours
Coldfoot	6 hours
Atigun Pass	8 hours
Deadhorse	13+ hours

Factor in an additional 1-2 hours per day for rest stops, wildlife viewing, construction delays, and bad weather.

Can I drive, walk or cycle to the Arctic Ocean?

NO. Public access ends at Deadhorse, about 8 miles/13 km from the ocean. Security gates on the access roads are guarded 24 hours a day and permits for individuals to travel on their own are not available. There is only one authorized tour provider. Reservations must be made at least 24 hours in advance. See back page for information.

Are the bugs really that bad?

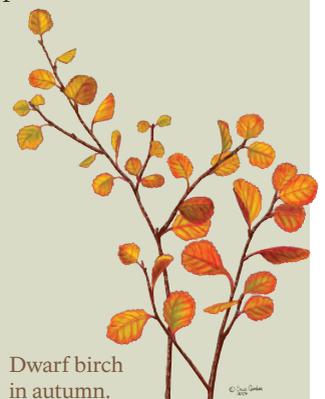

YES! Hordes of mosquitoes emerge in mid-June and last into August. Biting flies and gnats last into September. Insects are worst on calm days and in low, wetland areas. Hike and camp on ridges or wide gravel bars along rivers where a breeze may provide relief. Insect repellents containing DEET are most effective. A head net and bug jacket are essential if you plan on any outdoor activities.

When is the best time to visit?

A late May trip offers a chance to see thousands of migrating birds, but snow may still cover the ground. From June until mid-July wildflowers brighten the tundra and caribou congregate along the Coastal Plain. Mid-August brings rain, cool days, frosty nights, and the northern lights. Brilliant autumn colors peak around mid-August on the North Slope, late August in the Brooks Range, and early September south of the Yukon River. Snow begins to fly by late August or early September.

Does the highway close in the winter?

No. The road remains open for trucks hauling supplies to the oil fields and camps. Although the highway is maintained year-round, in winter services of any kind are only available in Coldfoot (MP 175) and Deadhorse (MP 414). Winter driving conditions are extremely hazardous. Drivers face snow, ice, wind, whiteouts, and dangerous cold with windchills to -70° F (-57° C). Winter travel should be done in a vehicle equipped for extreme cold weather conditions and proper tires. Winter driving experience is essential.

Dwarf birch in autumn.

Points of Interest

Hess Creek Overlook (MP* 21)

This pullout looks over Hess Creek meandering west to meet the Yukon River. In 2003, the Erickson Creek Fire burned almost 118,000 acres (47,200 ha) in this area.

▲ Take a break at BLM's Yukon Crossing Visitor Contact Station, located on the right just after crossing the bridge. Volunteers are there to assist daily in summer. A short walk takes you to viewing decks on the riverbank.

Yukon River (MP 56)

The mighty Yukon River winds nearly 2,000 miles/3,200 km from Canada to the Bering Sea. Athabaskan people first traveled this river in birch bark canoes. During the gold rush, wood-fired sternwheelers ferried gold seekers and supplies for trading posts. Today, Yukon River residents use motorboats in summer and snowmachines in winter to travel this natural highway.

60 Mile (MP 60)

Public campground, one of four operated by the BLM along the Dalton Highway. It is near an artesian well with potable water and the only public dump station. See page 18.

Roller Coaster (MP 75)

North of the Yukon River, travelers encounter a series of steep hills named by truckers in the early years of pipeline construction, including Sand Hill (MP 73), Roller Coaster (MP 75), Mackey Hill (MP 87), Beaver Slide (MP 110) and Gobblers Knob (MP 132). Truckers today use the same names.

86-Mile Overlook

At MP 86.5, turn west and follow an access road uphill to an active gravel pit for an excellent view of the Yukon Flats National Wildlife Refuge to the east. Watch out for heavy equipment.

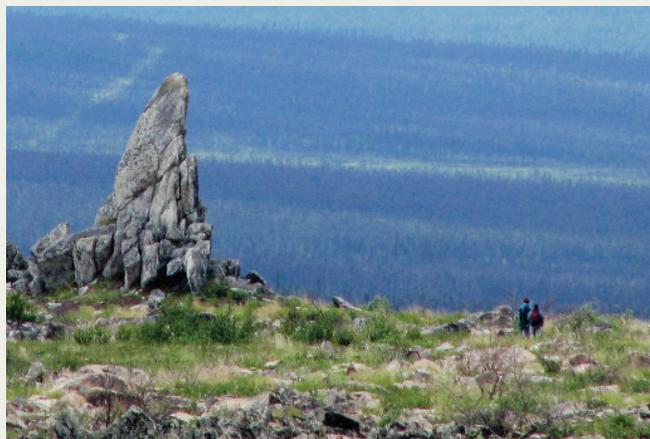

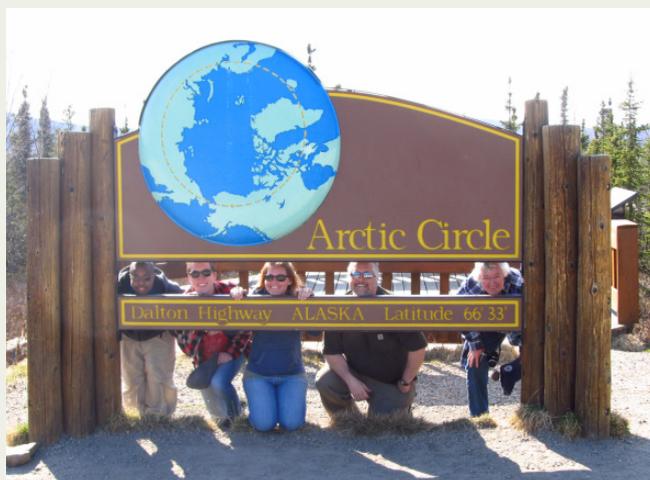

Photo by Whitney Root

▲ Finger Mountain Wayside (MP 98)

Stop at Finger Mountain to take in the panoramic views, explore the alpine tundra, and stroll the half-mile interpretive trail. Expect strong winds on this high ridge.

Arctic Circle Wayside (MP 115)

Follow the side road a short distance to the Arctic Circle sign and viewing deck with interpretive displays. Enjoy your lunch in the picnic area or drive the side road one-half mile uphill to camp in the BLM campground.

*MP refers to milepost from the beginning of the Dalton Highway.

Gobblers Knob (MP 132)

The pullout here offers an excellent view of the Brooks Range to the north. To see the midnight sun on solstice, climb up the hill to the east.

Grayling Lake Wayside (MP 150)

An ancient glacier carved this U-shaped valley and left a shallow lake. Moose feed on the nutrient-rich aquatic plants in summer. Charcoal, stone scrapers, and other artifacts found nearby indicate that Native hunters used this lookout for thousands of years.

Coldfoot (MP 175)

The original gold rush town of Coldfoot was located on the Middle Fork of the Koyukuk River near the mouth of Slate Creek. It got its name in 1900 when early prospectors reportedly got “cold feet” and left before winter set in.

▲ While in Coldfoot, visit the Arctic Interagency Visitor Center. Open daily until 10 pm from May 24–September 16.

Marion Creek Campground (MP 180)

This developed campground is operated by the BLM and offers 27 sites. See page 18 for campground details.

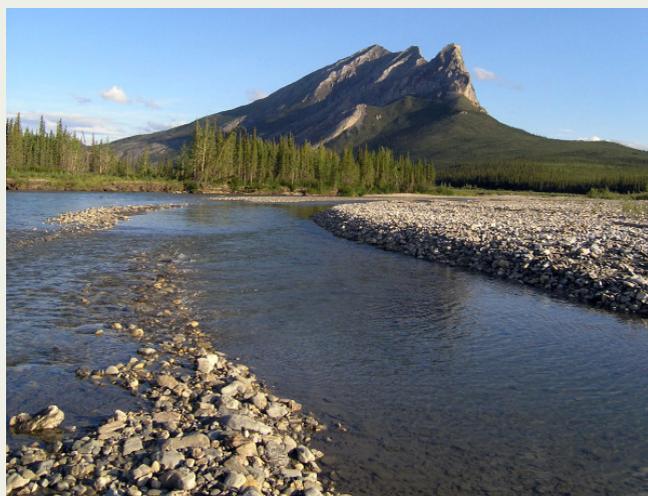

▲ Please note that all buildings in the Wiseman area are private property. Please stay on the roads.

What is the Arctic Circle?

The Arctic Circle is an imaginary line encircling the Earth at latitude 66°33' North where the sun does not set on summer solstice (June 20 or 21) or rise on winter solstice (December 21 or 22). As you travel farther north there are more days with 24-hour sunlight in summer or 24-hour night in winter. At the top of the world—the North Pole—the sun doesn't set for 180 days.

Wiseman (MP 189)

Just after crossing the Middle Fork Koyukuk Bridge #1, take the turnoff to the west and follow the signs 3 miles/5 km to the historic village of Wiseman. Established in 1907 when miners discovered gold in nearby Nolan Creek, the town was once a bustling community. Many residents today subsist by hunting, trapping, and gardening, and welcome visitors.

▲ Sukakpak Mountain (MP 204)

A massive wall that glows in the afternoon sun, Sukakpak Mountain is an awe-inspiring sight that rises to 4,459 feet (1,338 m). Peculiar ice-cored mounds known as palsas punctuate the ground at the mountain's base. “Sukakpak” is an Iñupiat Eskimo word meaning “marten deadfall.” Seen from the north, the mountain resembles a carefully balanced log used to trap marten.

Yellow Dryas

▲ *“...We enjoyed the vast panorama of the Brooks Range... endless mountains rising and falling as if the waves of some gigantic ocean had suddenly become frozen in full motion.”*
Robert Marshall, *Alaska Wilderness*

Farthest North Spruce (MP 235)

As you approach the headwaters of the Dietrich River, trees grow scarce until they disappear altogether. This last tall spruce, approximately 273 years old, was killed by a vandal in 2004.

Chandalar Shelf (MP 237)

Dramatic views encompass the headwaters of the Chandalar River to the east. The next few miles traverse a major winter avalanche zone. Transportation workers stationed here fire artillery shells to clear the slopes above the highway.

Atigun Pass (MP 244)

You cross the Continental Divide at Atigun Pass (elev. 4,739 ft/1422 m). Rivers south of here flow into the Pacific Ocean or Bering Sea, while rivers to the north flow into the Arctic Ocean. Watch for Dall sheep, which are often on the road or on nearby slopes. Storms can dump snow here even in June and July.

Galbraith Lake (MP 275)

This is all that remains of a large glacial lake that once occupied the entire Atigun Valley. A short distance to the east lies the Arctic National Wildlife Refuge. To reach the BLM public camping area follow the access road at MP 275 west for 4 miles/6.4 km. The last two miles are on an unimproved road.

Toolik Lake (MP 284)

The University of Alaska Fairbanks established a research station here in 1975, and conducts studies on arctic ecosystems and global climate change. Please take care to avoid their research sites, scattered throughout the surrounding area. There are no public facilities here and no camping. Access to the station is by invitation only.

Slope Mountain (MP 300)

Slope Mountain marks the northern boundary of the BLM-managed public land. From here north, the Alaska Department of Natural Resources manages the land around the Dalton Highway and Prudhoe Bay.

Happy Valley (MP 334)

Originally the site of a pipeline construction camp, Happy Valley offers easy access to the Sagavanirktok River as well as room for camping. The airstrip is active, so avoid camping or parking there.

Photo by Dennis R. Green

▲ Watch for muskoxen near the river from here to the coast. When resting, they look like large, dark humps with a cream-colored “saddle.”

Sag River Overlook (MP 348)

A short trail leads to a viewing deck with interpretive displays. On a clear day, you can see the Philip Smith Mountains 35 miles/56 km away. “Sag” is short for “Sagavanirktok.” The name is inupiaq in origin and translates as “swift current.”

Franklin Bluffs (MP 383)

Iron-rich soils on the far bank of the river give the bluffs their vivid colors. They are named after Sir John Franklin, the British explorer who mapped the Arctic coastline and searched for the Northwest Passage. Scan the gravel bars along the river for muskoxen and caribou.

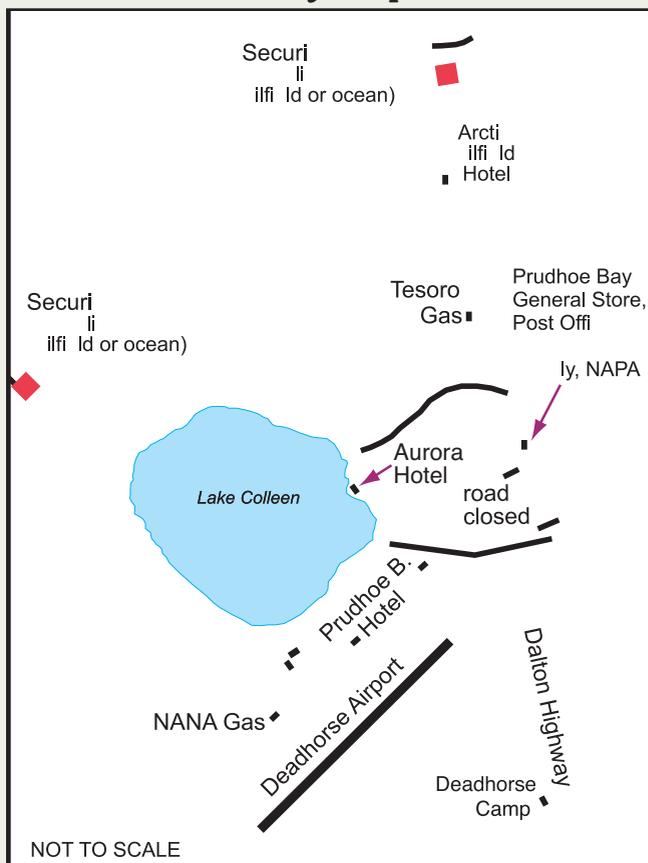

Deadhorse (MP 414)

Deadhorse is not a town but an industrial camp that supports the Prudhoe Bay oil fields. There are few amenities for visitors. Lodging is extremely limited and there are no grocery stores, public outhouses, or camping areas. The public highway ends about eight miles from the Arctic Ocean. You must be on an authorized tour to visit the Arctic Ocean. See back page for information.

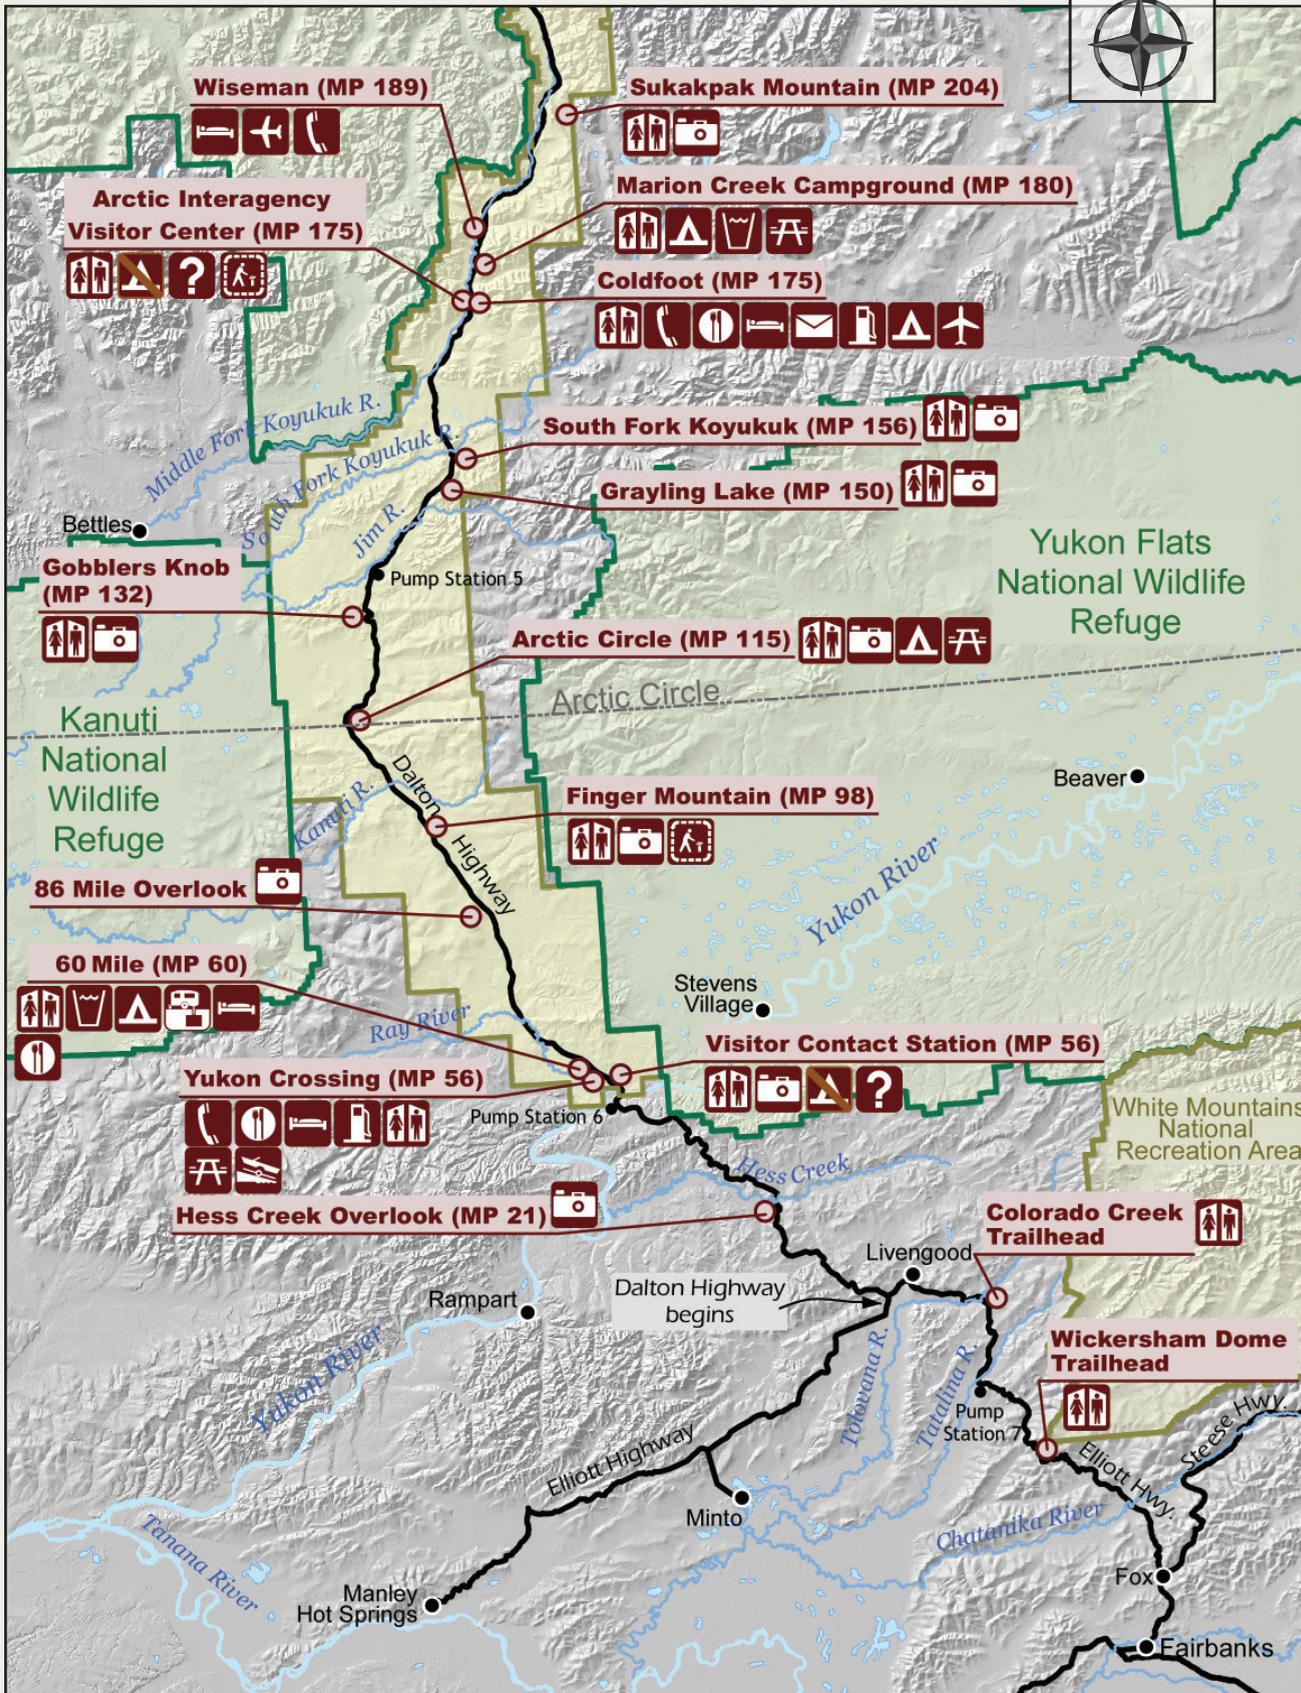

▲ Visitors enter the chilly waters of the Arctic Ocean.

Deadhorse vicinity map

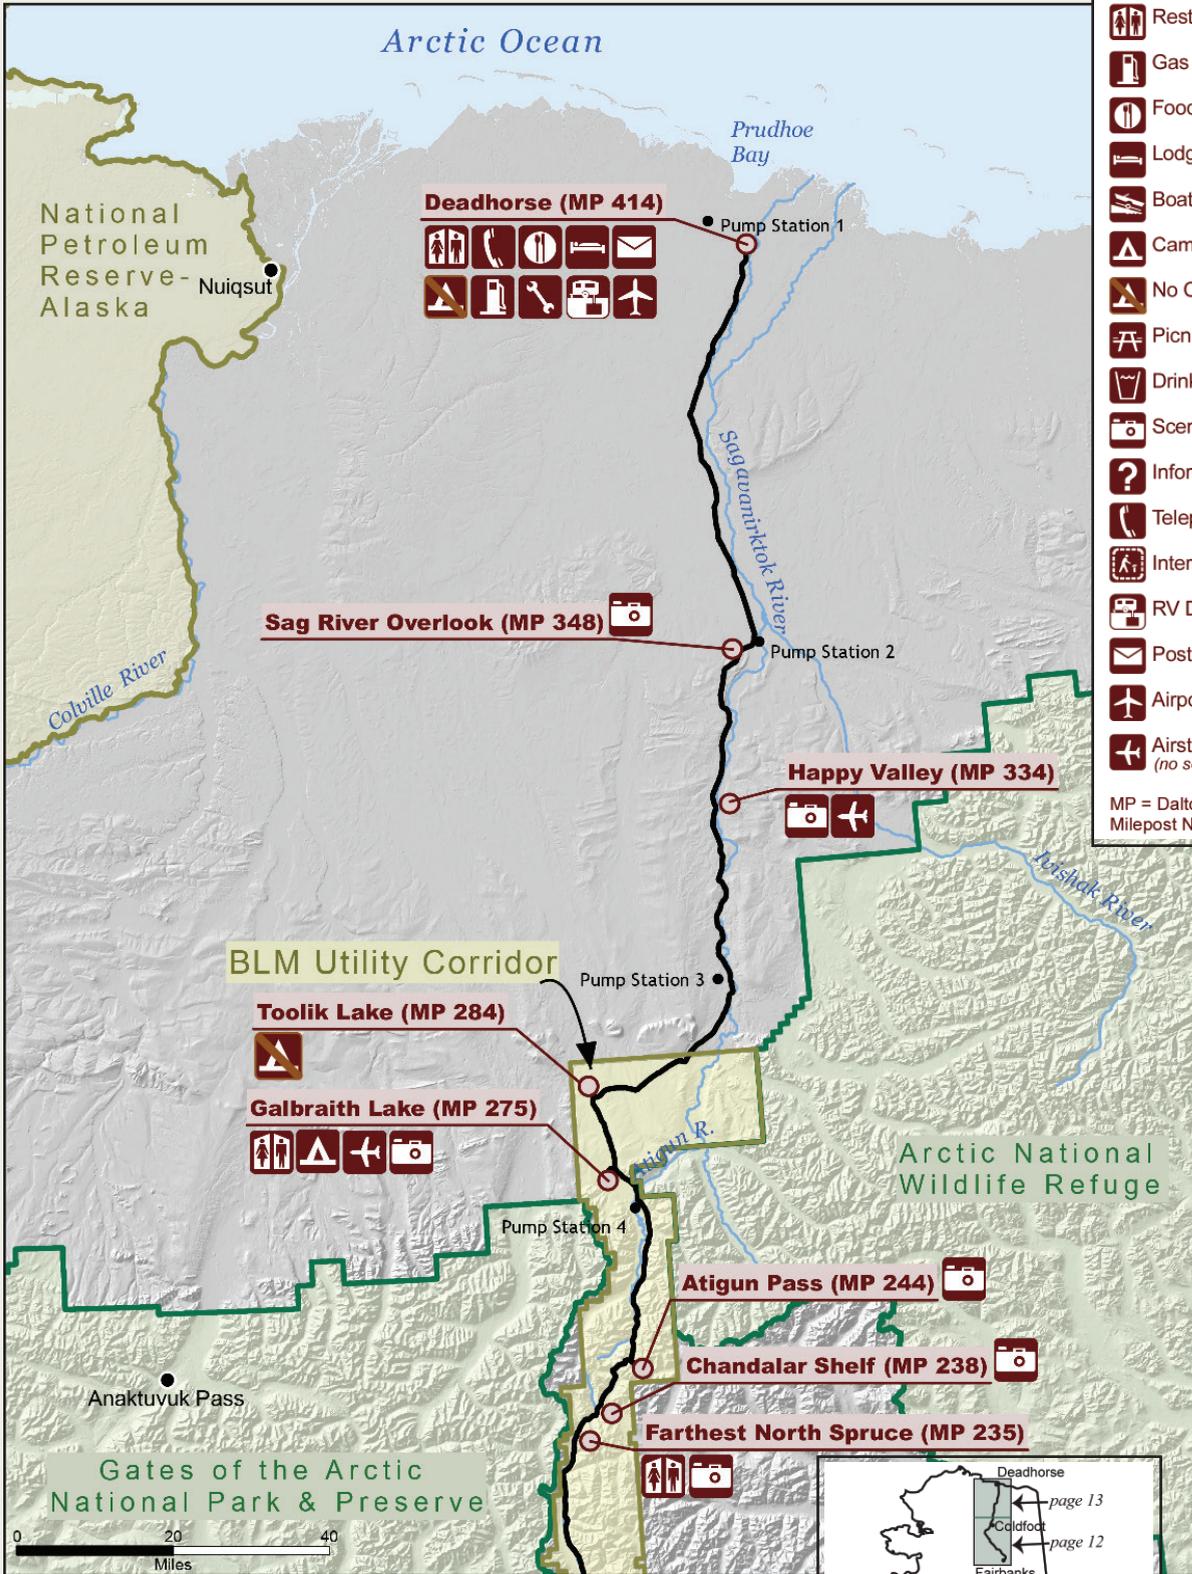

▲ Permafrost lies only inches beneath the surface of the Coastal Plain, creating a bizarre landscape of wetlands and ice-wedge polygons. From Deadhorse, you travel over permafrost up to 2,000 feet/600 m thick. This aerial photo shows caribou on polygonal ground.

An Icebound Land

The low angle of the sun means less heat to combat frigid temperatures. Thus, permanently-frozen ground, or *permafrost*, lies beneath much of northern Alaska and keeps water close to the surface. In arctic landscapes ice creates strange features, some of which you can see along the Dalton Highway.

Pingos look like isolated hills but have thick cores of ice. As groundwater freezes it forms a lump of ice. As more water migrates inward the lump slowly grows and forces the ground upwards. Pingos can be decades or thousands of years old. Open-system pingos arise from artesian water in the warmer Interior: a tree-covered one lies west of the road at Milepost 32.7. Closed-system pingos form out of ice beneath old lake beds on the much-colder North Slope.

Percy Pingo rises south of Deadhorse near Milepost 376.

Frost mounds at Sukakpak Mountain.

Frost Mounds look like miniature pingos and also have cores of ice. Mounds in various stages occur at Sukakpak Mountain, Milepost 204. They arise as groundwater moves downslope through the soil above the permafrost and freezes, pushing up the tundra. Mounds may appear and melt over one or more seasons or last for many years.

Thermokarsts form when lenses of underground ice thaw, often after a disturbance such as wildfire, earthquake, clearing ground for construction, or a warming period. Thermokarst ponds and lakes often have unstable shores with trees or tundra collapsing inwards along the edge. You can see one west of the highway at Milepost 215.

Small thermokarst near the Trans-Alaska Pipeline.

Aerial view of high-centered polygons.

Ice-wedge polygons form when the ground freezes, contracts, and cracks in geometric patterns. Water seeps into the cracks and over thousands of years, forms thick wedges of ice that push the soil up into ridges. If the ice in the ridges melts they subside, leaving high-centered polygons. Look for geometrically patterned ground alongside the highway north of Galbraith Lake. Polygons are especially prominent around Deadhorse.

Aufeis, or overflow, forms on streams during winter when the channel ice thickens, constricting the stream flow beneath. The water is forced through cracks onto the surface where it freezes. Over the winter, these sheets of water freeze into thick layers that can fill river valleys and last into August.

Aufeis at Galbraith Lake.

To learn more

Permafrost and ice-related features in Alaska are clearly explained and illustrated in *Permafrost: A Guide to Frozen Ground in Transition* by Neil Davis.

This Is Bear Country!

You may encounter bears anywhere along the Elliott and Dalton highways. Both black and grizzly bears are found south of the Brooks Range, and grizzlies roam all the way to the Arctic Ocean. All bears are potentially dangerous. It is illegal to feed wildlife or leave food where they can get it. Food-conditioned bears become a threat to people and frequently must be destroyed.

These tips provide minimum guidelines. Learn as much as you can about being safe around bears!

Avoid Encounters

KEEP A CLEAN CAMP: Store food, garbage, and attractants in bear resistant containers away from your tent.

LOOK AND LISTEN: Bears are active both day and night and may appear anywhere. Fresh tracks and droppings indicate that bears may be close.

DON'T SURPRISE: A startled bear may attack.

MAKE NOISE: Let bears know you're in the area—sing, yell, or clap your hands loudly. Bells may be ineffective. Be especially careful in thick brush or near noisy streams.

NEVER APPROACH: Stay at least 1/4 mile (400 m) from any bear. Sows may attack to defend their cubs.

If You Encounter a Bear

DO NOT RUN! Running may elicit a chase response. If the bear does not see you, backtrack or detour quickly and quietly away. Give the bear plenty of room. If the bear sees you, back away slowly. Speak in a low, calm voice while slowly waiving your arms to appear larger to the bear.

IF A BEAR APPROACHES stand your ground and keep your pack on. Let the bear know you are human. Prepare your deterrent, and back away slowly. If the bear follows, stop and hold your ground. If a bear continues to focus on you or its approach become more assertive: raise your voice, beat on pots and pans, use noisemakers, and throw rocks or sticks. Use your deterrent against the bear.

IF A GRIZZLY MAKES PHYSICAL CONTACT, PLAY DEAD. Lie flat on your stomach and lace your fingers behind your neck. Your pack may help protect your back and neck. If the bear starts eating you fight back!

▲ Bears often appear tame but are unpredictable. Keep your distance!

IF A BLACK BEAR ATTACKS, FIGHT BACK. Fight back with everything available to you.

Should I carry a firearm?

If you are inexperienced and cannot load, aim, and shoot accurately in an emergency, you would be better off carrying pepper spray.

Does pepper spray work?

Pepper sprays have been used successfully to deter bears. Most sprays have an effective range of about 30 feet (9 m), but are greatly affected by wind. Spray should not be used like insect repellent—don't spray it on your clothes or equipment. Before taking it on an airplane, tell the pilot so it can be stored safely.

Wolves may approach people along the Dalton. In 2006, two people were chased and one was bitten. Some incidents appear to involve food-conditioned wolves. Never approach or feed wolves. Do not walk pets in an area where you see wolves or fresh wolf sign—wolves may act aggressively toward pets, even those on a leash. For more information go to www.adfg.alaska.gov and type "living with wolves" in the search bar.

Do your homework

- Ask for the brochure Bear Facts, free at any state or federal visitor center. Go to www.adfg.alaska.gov and type "living with bears" in the search bar.
- View the video Staying Safe in Bear Country at the Arctic Interagency Visitor Center.
- Read the book Bear Attacks by Stephen Herrero, available at any Alaska Geographic bookstore.

Watching Wildlife

Boreal Forest

The boreal forest is the largest forest ecosystem in the world, encircling the entire northern hemisphere. A cold, dry climate and areas of permanently frozen ground dictate what grows here. Scraggly spruce trees may be more than a century old. Wildfires recycle nutrients into the soil and create new sources of food and shelter for wildlife.

Here you will see few animals unless they cross the road. The forest hides moose, wolf, fox, black bear, snowshoe hare, lynx, and over 50 species of songbirds. Beaver, muskrat, and mink may be glimpsed in streams and ponds along with Pacific loon, horned grebe, widgeon, scaup, and northern shoveler.

Brooks Range

Steep, rocky peaks and glacier-carved valleys dominate this rugged landscape. Extending over 700 miles (1120 km) from east to west, the Brooks Range separates the Arctic's plants, birds, and weather systems from Interior Alaska.

Scan open areas and alpine valleys for moose, caribou, wolf, wolverine, and grizzly. Search the sky for golden eagle and rocky slopes for northern wheatear, Dall sheep, and Alaska marmot—a species unique to the Brooks Range.

North Slope

From Slope Mountain north, continuous permafrost lies beneath the surface. Only tough, ground-hugging plants can survive the frozen ground, frigid temperatures, icy winds, and weak sunlight. In this treeless landscape you can see animals from great distances.

▲ Dall sheep rams on the road at Atigun Pass.

▲ Keep a safe viewing distance to avoid disturbing wildlife.

Tips for Viewing Wildlife

- Be patient.
- Scan open areas such as mountain slopes, riverbanks, lakes and meadows.
- Use binoculars, spotting scopes, and telephoto lenses to bring animals closer.
- Stay inside your vehicle—it acts as a viewing blind and animals are less likely to flee.
- Animals tend to be more active in the evening and early morning hours.

Wolf, wolverine, grizzly, red fox, caribou, and muskox sometimes forage near the highway. Hunting birds such as northern harrier, short-eared owl, peregrine, and gyrfalcon search for arctic ground squirrels, lemmings, and small birds such as Lapland longspur and golden plover. Scan brushy swales for unusual songbirds, especially Smith's longspur, yellow wagtail, and bluethroat.

Coastal Plain

With annual precipitation of about five inches—less than the Sonoran Desert—we expect the Arctic to be dry. But underlying permafrost seals the ground. Vast wetlands provide protein-rich sedges and huge populations of insects and other invertebrates—a banquet for migratory birds and other grazers.

Here you may see truly Arctic species such as arctic fox, snowy owl, and pomarine jaeger. Caribou congregate to feed in late June and early July. Muskoxen browse along the Sagavanirktok River. Around the numerous ponds, look for tundra swan, ruddy turnstone, phalarope, white-fronted goose and long-tailed duck. At the coast, you may see yellow-billed loon, Sabine's gull, and three species of eiders—common, king, and spectacled.

Recreation Along the Dalton

Here you can experience wild Alaska, where the land beyond the highway and pipeline lies virtually untouched. There are no trails, bridges or signs to point the way. Choose your own route, encounter your own challenges, and make your own discoveries.

This wild country demands caution, preparation, and self-reliance. Even for a short day-hike, prepare for challenging terrain, unpredictable weather, and medical emergencies. If you have questions about where to go or how to prepare, talk with staff at the Arctic Interagency Visitor Center in Coldfoot.

Camping

Recreational camping is limited to 14 days at any one spot. Park well off the road—passing vehicles can fling rocks more than 30 feet/9 m off the highway—and do not block access roads to the pipeline.

The BLM has four campgrounds (see chart below); none has electrical hookups. Marion Creek, 5 miles/8 km north of Coldfoot, is a developed campground with potable water (hand pump), both pull-through and tent-only sites, and a Campground Host available from late May to early September.

▲ Marion Creek Campground.

Hiking

The best hiking is in the Brooks Range, where ridges and stream drainages provide firm footing and the forest thins to low-growing tundra. Throughout the Arctic there are wetlands and bogs that hinder walking. Areas of tussocks — basketball-sized clumps of sedge surrounded by watery moss—are particularly aggravating. Tussock fields occur in mountain valleys and dominate the landscape of the North Slope. Waterproof boots with good ankle support are essential.

Hiking east from the highway will lead you to the Arctic National Wildlife Refuge while hiking west leads to Gates of the Arctic National Park and Preserve. Choose your route with care and bring topographic maps and a compass with you; a GPS can also be useful. Note: the declination varies 27°–30° or more east of true north; be sure you adjust your compass.

Campgrounds

NAME	LOCATION	SERVICES	NOTES
60 Mile undeveloped	4 miles/6.4 km north of the Yukon River at MP 60	potable water dump station outhouse host on site	Best sites are on high ground near north entrance.
Arctic Circle undeveloped	MP 115, up the hill behind viewing deck and picnic area	NO WATER outhouse trash containers	No camping at viewing deck or picnic area.
Marion Creek 27 sites, some for RVs	5 miles/8 km north of Coldfoot at MP 180	potable water outhouse trash containers host on site	Fee area. A two-mile hike upstream leads to a 20-foot waterfall.
Galbraith Lake undeveloped	MP 275, follow signs to airstrip, then continue past buildings 2.5 miles/4 km on unimproved road	creek nearby, treat water outhouse trash containers	Spectacular views of the lake and Brooks Range.

Hunting

Hunting is permitted in most areas, but there are special regulations. **From the Yukon River north, hunting with firearms is prohibited within 5 miles/8 km either side of the highway.** Bow hunting is permitted within most of this area. Hunting is prohibited in the Prudhoe Bay Closed Area. Sport hunting is prohibited in Gates of the Arctic National Park, but permitted in Gates of the Arctic National Preserve. Be sure you have accurate maps of the boundaries.

For complete regulations, maps of closed areas, and assistance in planning your hunt, please contact the Alaska Department of Fish and Game at 907-459-7206.

Backcountry

Backcountry visitors to Gates of the Arctic National Park may register at the Arctic Interagency Visitor Center in Coldfoot (open daily in summer). All hikers may borrow bear-resistant containers for free from the Center on a first-come, first-served basis.

Fishing

Arctic grayling, whitefish, Dolly Varden, Arctic char, lake trout, burbot, and northern pike can all be found in the far north. Fish in the Arctic grow and reproduce slowly and are susceptible to overharvest. Anglers are encouraged to use barbless hooks and release fish without injury.

The following regulations are in effect 5 miles/8 km either side of the highway: fishing for salmon is prohibited; lake trout are catch-and-release only; daily bag and possession limit for Arctic grayling is 5 fish. You need an Alaska sport fishing license and a current regulations booklet for the Arctic-Yukon-Kuskokwim Region.

Off-Road Vehicles

State statute prohibits off-road vehicles within 5 miles/8 km either side of the highway from the Yukon River to the Arctic Ocean.

Canoeing and Rafting

There are several excellent river trips along the Dalton. For more detailed descriptions of these rivers, check with the Alaska Public Lands Information Center in Fairbanks or the Arctic Interagency Visitor Center (see back page).

- The Jim River and Middle Fork, Koyukuk River: Class I-II, several access points along the highway.
- Atigun and Sagavanirktok Rivers: Class III-IV+ whitewater, access Atigun at MP 271; Sag at MP 306. For expert boaters only.
- Ivishak National Wild River: Class II, access by chartered air service from Deadhorse or Coldfoot.

Gold Panning

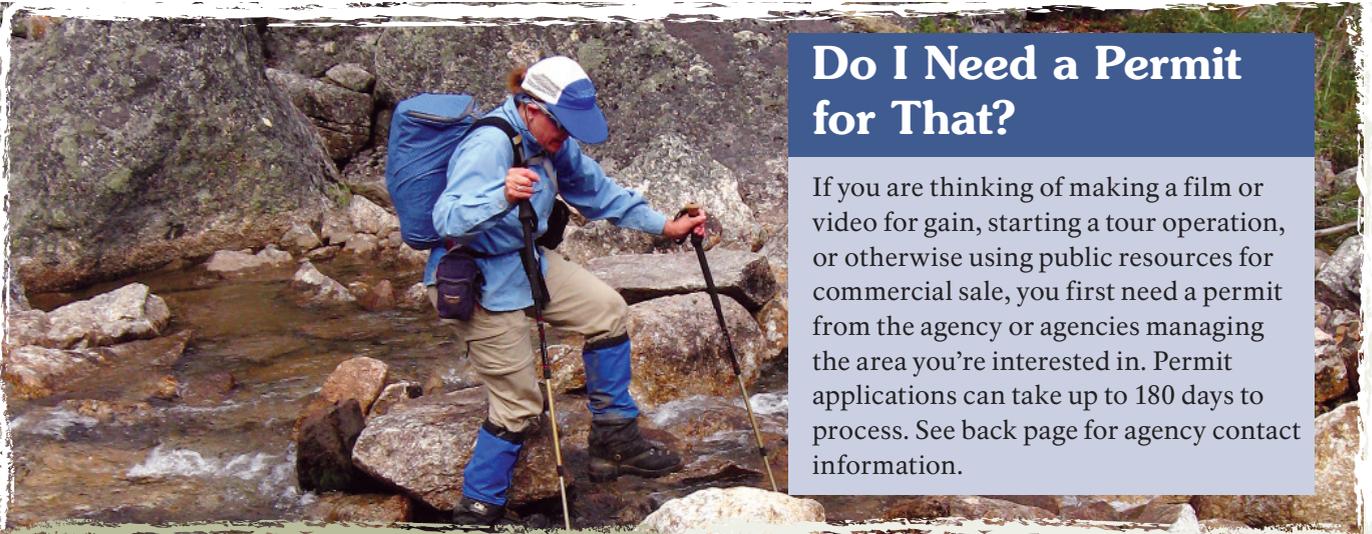

Panning is permitted on a few federal stream segments along the Dalton Highway south of Atigun Pass (MP 244). No panning in the pipeline right-of-way (27 feet/8.2 m on either side of the pipeline) and no panning on federal mining claims without permission. **Recreational suction dredging is prohibited in the Utility Corridor.**

For detailed information, pick up a copy of *Panning for Gold along the Dalton Highway* at one of the visitor centers. This free brochure lists creeks and rivers that are open to the public for recreational panning and rates their potential for gold.

▲ Rafters portage around a big drop on the Atigun.

Photo by Lisa Shorn-Jodwalis

Do I Need a Permit for That?

If you are thinking of making a film or video for gain, starting a tour operation, or otherwise using public resources for commercial sale, you first need a permit from the agency or agencies managing the area you're interested in. Permit applications can take up to 180 days to process. See back page for agency contact information.

Backcountry Hazards

If you venture off the highway, know that there are very real risks and proceed with caution. You will probably not see anyone else and you are likely to be far from help.

- Streams and rivers are bitter cold, and heavy rain or snow can swell them to dangerous levels. Know the proper techniques before attempting to cross, or change your route to avoid hazardous crossings.
- Minimize animal encounters (see page 17); keep your camp and gear clean; cook at least 100 feet/30 m from your tent site; use bear-resistant food containers and store them away from camp and cook areas; carry out all waste.
- Treat all water to prevent infection by Giardia.
- Prepare for sudden and severe weather; snow can fall anytime in the Brooks Range and on the North Slope. Know how to prevent, recognize, and treat hypothermia before heading out.

LEAVE NO TRACE

- Plan Ahead and Prepare
- Travel and Camp on Durable Surfaces
- Dispose of Waste Properly
- Leave What You Find
- Minimize Campfire Impacts
- Respect Wildlife
- Be Considerate of Other Visitors

Where's the best place to view the midnight sun?

At the Arctic Circle, the midnight sun circles the northern horizon and drops behind the Brooks Range. The closest view is from the hill above Gobblers Knob at MP 132, 17 miles/27 km farther north. If you travel north of Atigun Pass (MP 245) you can experience the full 24 hours of sunlight.

How cold does it get in winter?

The coldest temperature ever recorded in the United States was $-80^{\circ}\text{F}/-62^{\circ}\text{C}$ at Prospect Camp, 39 miles/62 km south of Coldfoot in 1971. On January 28, 2012, an unofficial temperature of $-79^{\circ}\text{F}/-62^{\circ}\text{C}$ was recorded at nearby Jim River Maintenance Station. Then the weather station battery died.

Wild Spaces, Public Places

Most of the land you see from the Dalton Highway is federal public land, a legacy for future generations. These areas are so unique that Congress established special designations which honor their special values to the nation and the world.

The Utility Corridor

In 1971 after oil was discovered on the North Slope, the Utility Corridor was established to protect the route of the Trans-Alaska Pipeline. The Corridor's boundaries vary from less than a mile to nearly 12 miles/19 km from the pipeline. While the corridor's primary function is the transportation of energy resources, the Bureau of Land Management encourages recreational activities such as hiking, fishing, gold panning, and canoeing on these lands.

Gates of the Arctic National Park & Preserve

Much of the Brooks Range west of the Dalton Highway lies within one of the premier wilderness areas in the National Park System. Forester and conservationist Robert Marshall explored the area in the 1930s. Impressed by two massive peaks flanking the North Fork of the Koyukuk River, he called them the "Gates of the Arctic." Encompassing 8.4 million acres, the park and preserve protect primeval landscapes, their flora and fauna, and the culture and traditions of Native people.

Arctic National Wildlife Refuge

Bordering the Utility Corridor near Atigun Canyon, this refuge extends east across the Brooks Range and North Slope to Canada.

It offers extraordinary wilderness, recreation, and wildlife values. The Porcupine Caribou Herd (named for the Porcupine River on the herd's migration route), polar bears, muskoxen, and snow geese depend on its unspoiled environment. Pioneer Alaska conservationists Margaret and Olaus Murie traveled the region by dog team and canoe, and were instrumental in gaining refuge status for the area.

Kanuti National Wildlife Refuge

Located west of the Finger Mountain area and slightly larger than the state of Delaware, this refuge protects large wetland areas that are critical to nesting waterfowl and other wildlife. These resources provide sustenance for the people of the Koyukuk River valley.

Yukon Flats National Wildlife Refuge

Encompassing an area larger than Vermont and Connecticut combined, this refuge protects a vast complex of lakes and rivers in the Yukon watershed upstream from the Dalton Highway. Wildlife, especially migratory birds such as ducks, geese, and songbirds, thrive in these wetlands and support the hunting and gathering tradition of Yukon River villages.

Woolly Lousewort

TRAVELING THROUGH THE HEART OF ALASKA'S PREHISTORY

By Crystal Glassburn

You might not imagine yourself as a time traveler when you start up the Dalton Highway, but the journey winds through 10,000 years of human history, uncovered over the past 50 years by archaeologists working along today's highway corridor. Although signs of this history may be subtle, and spread across a vast landscape, they reveal the technologies and cultures of people supremely adapted to a land ruled by snow and ice for seven to nine months each year.

Athabascan and Iñupiaq people have thrived here for millennia, their survival dependent not only on keen observations of weather, seasonal changes, and the migrations of salmon, caribou, and birds, but on maintaining strong communities and instructing the next generations. They have quickly adopted new technology – whether bows and arrows or rifles, riverboats, and snowmachines – while preserving traditional knowledge and culture.

Interior Alaska's rolling hills, meandering rivers, and deep forests have long been home to Athabascan people. Archaeologists have found their short-term campsites and hunting lookouts in upland areas we now call Fort Hamlin Hills, Finger Mountain, and Grayling Lake. They left stone tools such as scrapers and bifaces, used for processing hides and hunting. Athabascans also used the Yukon, Kanuti, and Koyukuk River corridors for travel. Their winter villages along forested rivers allowed easy access to firewood and wildlife such as lynx, wolverine, wolf, and marten, whose thick furs were sewn into warm clothing.

Inland Iñupiaq people known as the Nunamiut traditionally lived throughout the western Brooks Range and North Slope. Nomads and skilled hunters, they spent the fall and winter seasons in the northern foothills along large river valleys such as the Atigun, Sagavanirktok, and Anaktuvuk. Some of their stone tent rings and cairns still lie among the tundra grasses and wildflowers.

Every August, hundreds of thousands of caribou returned to the Brooks Range from their calving grounds on the Arctic coast – a seasonal migration that continues today. The Nunamiut built drive lines to direct the caribou into corrals, where they could be harvested

more easily. Then they cached the meat for the long, cold winter ahead. In spring, their food stores depleted, they traveled by dogsled and umiaq (skin boat) north to the coast. There, they traded with other Iñupiaq groups and harvested seals, walrus, and whales, before trekking back to the mountains to prepare for winter once again.

As you speed up the Dalton Highway in your heated, technologically advanced vehicle, take a mental journey back in time. Imagine traveling 175 miles/282 km from Atigun Pass to Prudhoe Bay and back on foot, building shelters, making clothes, and hunting for your food along the way. What would you need to succeed? 10,000 years of experience might help.

Crystal is an Archaeologist at the Bureau of Land Management in Fairbanks. She was born in Alaska and has always admired the resourcefulness and tenacity of Native people, who flourish in the dangerous and beautiful landscapes of the north. To learn more about Alaskan Native culture, Crystal recommends the following books:

- *Make Prayers to the Raven* by Richard Nelson
- *Nunamiut: Among Alaska's Inland Eskimo* by Helge Ingstad
- *In a Hungry Country: Essays by Simon Paneak* by John Campbell

Appreciate, but don't disturb!

If you find artifacts such as stone tools, tent rings, bones, cabins, historic cans, or other items, please leave the objects and sites as you found them for the next visitor to enjoy. It is against Federal Law to collect or disturb archaeological items on public lands.

A biface (stone tool that is worked on both sides) lays on the ground at a site in the Brooks Range where it was dropped hundreds or even thousands of years ago.

Stay Connected

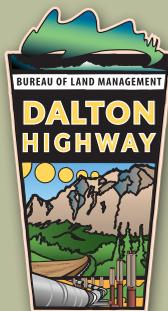

As the official nonprofit education partner of the Dalton Highway region, Alaska Geographic connects people with Alaska's magnificent wildlands through youth leadership programs, experiential education, volunteer stewardship programs, maps, award-winning books, and through direct financial aid to Alaska's parks, forests, and refuges.

Alaska Geographic operates bookstores across the state, including two locations along the Dalton Highway: The Visitor Contact Station at the Yukon River Crossing and the Arctic Interagency Visitor Center in Coldfoot. A portion of every purchase made at these Alaska Geographic stores directly supports the Dalton Highway Corridor by funding educational and interpretive programs and projects. Since 1959, Alaska Geographic has donated more than \$20 million to Alaska's public lands.

Please consider supporting Alaska's lands by becoming a member of Alaska Geographic. To learn more about our work and the benefits of membership, or to browse our selection of Alaska books, maps, and films, visit one of our stores or point your web browser to akgeo.org

akgeo.org

Pins, patches, hats, and other products featuring this unique Arctic Circle design are available exclusively from Alaska Geographic.

Planning Your Trip

Visit the Alaska Geographic bookstore in Coldfoot located at the Arctic Interagency Visitor Center to find these useful guides. In addition to books, visitors will also find maps, journals, posters, field bags, and more.

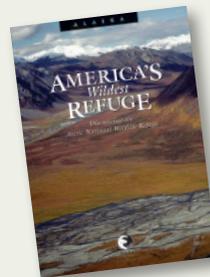

Arctic Visions & Voices

A Journey into Northern Alaska

Alaska's Dalton Highway provides access to National Parks, National Wildlife Refuges, and BLM public lands, with their bounty of recreational, subsistence, and mineral resources. Meet the people who visit, live, and work along America's farthest-north road and experience the visions and voices of this vast, wild, and magnificent land.

\$6.95

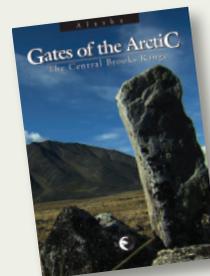

America's Wildest Refuge DVD

Discovering the Arctic National Wildlife Refuge

A documentary produced in partnership with Fish & Wildlife Service to celebrate the 50th anniversary of the Arctic National Wildlife Refuge. From forested lowlands to towering mountains, this film helps you envision earth prior to modern civilization. The Arctic Refuge protects an entire ecosystem unfettered by the influence of humans.

Item #31001

\$12.95

Gates of the Arctic DVD Alaska's Brooks Range

Guiding us through one of Alaska's wildest places, anthropologist Richard Nelson reveals the tenuous, yet rich, nature of life above the Arctic Circle. From unique wildlife to conservationists Bob Marshall and Mardy Murie, this film is ultimately about the people who call wilderness home.

Item #12415

\$9.95

Dillon Mountain (L) and Sukakpak Mountain (R).
